Forensic science is any scientific field that is applied to the field of law.[1] Forensic scientists are tasked with the collection, preservation, and analysis of scientific evidence during the course of an investigation. While some forensic scientists travel to the scene to collect the evidence themselves, others occupy a purely laboratory role, performing analysis on objects brought to them by other individuals.[2] In addition to their laboratory role, forensic scientists testify as expert witnesses in both criminal and civil cases and can work for either the prosecution or the defense. While any field could technically be forensic, certain sections have developed over time to encompass the majority of forensically related cases. Due to the nature of their position, forensic scientists are expected to uphold a high level of integrity and maintain strict ethical guidelines regarding their work.
