David Attenborough's legendary BBC crew explains and shows wildlife all over planet earth in 10 episodes. The first is an overview the challenges facing life, the others are dedicated to hunting, the deep sea and various major evolutionary groups of creatures: plants, primates and other large sections of other vertebrates and invertebrates.

In nature, living long enough to breed is a monumental struggle. Many animals and plants go to extremes to give themselves a chance. Uniquely, three brother cheetahs band together to bring down a huge ostrich. Aerial photography reveals how bottle-nosed dolphins trap fish in a ring of mud, and time-lapse cameras show how the Venus flytrap ensnares insect victims. The strawberry frog carries a tadpole high into a tree and drops it in a water-filled bromeliad. The frog must climb back from the ground every day to feed it. Fledgling chinstrap penguins undertake a heroic and tragic journey through the broken ice to get out to sea. Many can barely swim and the formidable leopard seal lies in wait.
