Mammals have adopted diverse strategies to hunt their prey and evade predators. As well as revisiting the cheetah and dolphin hunts first shown in episode one, the programme shows how a sure-footed ibex kid escapes a hunting fox by bounding across a precipitous mountainside above the Dead Sea.

With David Attenborough. Mammals' ability to learn new tricks is the key to survival in the knife-edge world of hunters and hunted. In a TV first, a killer whale off the Falklands does something unique: it sneaks into a pool where elephant seal pups learn to swim and snatches them, saving itself the trouble of hunting in the open sea. Slow-motion cameras reveal the star-nosed mole's newly-discovered technique for smelling prey underwater: it exhales then inhales a bubble of air ten times per second. Young ibex soon learn the only way to escape a fox - run up an almost vertical cliff face - and young stoats fight mock battles, learning the skills that make them one of the world's most efficient predators.
